How to dispose of waste safely

Cooking Fat

Allow the fat to cool and solidify, then scrape it out; wrap it into some newspaper or tin foil and dispose of it in your bin. Alternatively, pour it into a suitable container and when it has cooled throw it in the bin - the fat will be very hot in its liquid state so take care not to burn yourself.

Sanitary Towels, Tampons and Panty Liners

Wrap well and place them in the bin, special disposal bags are available at pharmacies and supermarkets. In public toilets please place them in the sanitary disposal bin provided.

Condoms, Incontinence Pads, Used Plasters and Bandages

Wrap well and put them in the bin.

Disposable Nappies and Wipes

Wrap well and place in a bin. Nappy disposal bags are also available from supermarkets.

Razor Blades

To avoid injury, place razor blades in a solid container before placing in the bin.

Medicines

Return all unused medicines to your local pharmacy for safe disposal. Always keep medicines out of the reach of children, even when disposed of.

Used Syringes and Needles

Needles and syringes should be taken to your nearest disposal bank, your GP or pharmacy can direct you to the nearest disposal bank.

All Other Waste

Wrap well if necessary and dispose of safely in your bin. For all other liquids, contact your local council for details of your nearest household waste recycling centre.

Don't rush to flush!

A guide on what to flush

To flush or not to flush?

That's the question

Pumping stations are designed to act as a collection point for waste, which is stored in a large chamber before being pumped to the main sewer.

They are designed to pump the 3 P's - Pee, Poo and (toilet) Paper!

Unfortunately various inappropriate materials are disposed of down toilets and sinks, causing unnecessary blockages within drainage systems. In turn, this leads to pumping station breakdowns and premature pump failures, which can result in more serious problems including the flooding of your home.

Domestic waste pipes are typically only 100mm (4 inches) in diameter, therefore it's not surprising that blockages occur if inappropriate material is flushed down the toilet.

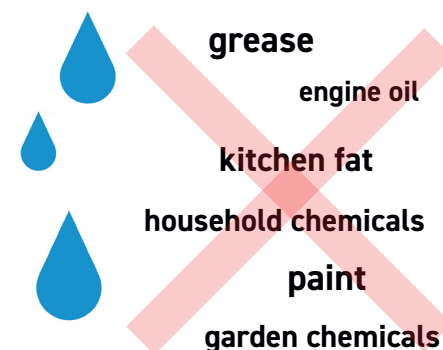

Don't flush

Here's some toilet tips

Many liquids
should NOT be put
into the drainage
system. These
include:

Don't pour

**Help to prevent blockages and
unwanted drainage problems to your
property. Simply follow these steps:**

Have a bin in the
bathroom, so
nobody's tempted
to flush

Never put food
scraps, fat or oil
down the loo

Wipes, cotton wool
buds, sanitary
products and
nappies belong in
the bin
